1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claim 25-80 are rejected under 35 U.S.C. 103(a) as being unpatentable over French Demande de Brevet d'Invention No. 76 35004 in view of Ring et al (US 4,854,707).

The French document shows measuring the diameter of an elongated article (2) of circular cross section by placing it in a fan-shaped beam of light and determining where the edges of the resulting shadow are located on detectors (4,5). There is an optical means (13) for determining the location of the object within the fan-shaped beam. While the French document does not appear to teach using the diffraction pattern resulting from the passage of the light over the edge of the object to improve the measurement, this is a known technique in the art, as shown by Ring et al; see figure 2 and column 3, line 47 through column 4, line 4. It would have been obvious to use this known method for determining edge location in the device of the French document because it is a known technique which produces accurate measurements. Those in the art could, using only ordinary skill, add appropriate lenses and the like and other means to ensure accuracy.
